Shear Engineering Corporation has been offering a complete range of civil and structural engineering services since 1985. Shear Engineering Corporation has extensive experience with all aspects of residential housing design. Our design experience includes single-family custom homes, multi-family structures, residential building additions and remodels along with many other items related to residential structural design. A majority of our experience stems from projects throughout Northern Colorado cities and mountain towns but we have been involved in residential projects throughout Colorado and Wyoming. We work every day with architects, contractors and homeowners to ensure the desired final product is received in a prompt and professional manner. Shear Engineering is professionally registered in Colorado, Kansas, Nebraska, and Wyoming.
